CLASSIFICATION & DEFINITIONS OF BULK MATERIALS

FOREWORD

The CEMA Engineering Conference recognizes that the basis of all bulk material conveyor engineering is the precise definition and accurate classification of materials according to their individual handling characteristics under a specific combination of conditions of temperature, humidity, sizes and distribution of lumps, friability, and so on, including all factors that influence the selection of proper types and sizes of conveyors, horizontal, inclined or vertical.

This exacting task of cataloging bulk materials was assigned by the Conference to the CEMA Committee for Materials Classification & Definition, a task that was greatly magnified by the increasing flow of new materials from the world’s geometrically expanding technology in all fields and the alteration of older materials into forms with different handling characteristics.

This task can, therefore, never be considered as having been completed. The Committee fully realizes that its conclusions at the time of any publication represents only that part of the work that has been completed to date.

For that reason, it is the earnest recommendation of the members of the Conveyor Equipment Manufacturers Association that competent engineering and technological assistance be sought whenever there is the slightest doubt as to how any material will behave under specific conditions.

It is desirable and necessary that materials and conditions be described precisely and completely whenever equipment manufacturers and consulting engineers are called in to make recommendations.

Prepared as a service to the industry by the CEMA Bulk Handling Section

SUMMARY OF CHANGES IN THIS EDITION

This 2003 Edition updates, Chapter 1, Table 2, “Comparison of U.S. Standard Sieves and Tyler Sieves”.

The updated table has been renamed “Comparison of U.S., ISO, and Tyler Standard Sieves”. It incorporates ISO Sieve designations as well as the current U.S. measurement changes to accommodate ISO Standard 133. These changes are also reflected in changes to Table 6 “Average Size System from Screen Analysis”.

This Edition includes a more readable version of Chapter 2, Figure 9, “CEMA Size Code Classes vs Particle Size - Inches.”

This Edition updates, Chapter 3, “The Material Table”.

The updated table amalgamates virtually all of the CEMA Material Handling Characteristics Data that the Association has available and has published in its two other documents which deal with material handling characteristics; Belt Conveyors for Bulk Materials and CEMA Book 350: Screw Conveyors.

To keep this document updated, and of maximum utility to the industry, we welcome, and are prepared to consider for inclusion in future editions, new material and characterizations submitted to us from any members of the bulk material conveying industry.
# CONTENTS

## CHAPTER

### 1 TERMINOLOGY: DEFINITIONS, TEST PROCEDURES OR EXAMPLES  PAGE

1. Physical Characteristics  

   A- 1 Abrasiveness  
   A- 2 Angle of external friction  
   A- 3 Angle of internal friction  
   A- 4 Angle of maximum inclination  
   A- 5 Angle of repose  
   A- 6 Angle of slide  
   A- 7 Angle of surcharge  
   A- 8 Bulk density - loose  
   A- 9 Bulk density - vibrated  
   A-10 Cohesiveness  
   A-11 Elevated temperature  
   A-12 Flowability - flow function  
   A-13 Lumps - size and weight  
   A-14 Specific gravity  
   A-15 Moisture content  
   A-16 Particle hardness  
   A-17 Screen analysis and particle size consist  
   A-18 Sized and unsized material  

2. Hazards Affecting Conveyability  

   B-1 Aeration - fluidity  
   B-2 Becomes plastic or tends to soften  
   B-3 Builds up and hardens  
   B-4 Corrosive  
   B-5 Generates static electricity  
   B-6 Degradable - size breakdown  
   B-7 Deteriorates in storage - decomposition  
   B-8 Dusty  
   B-10 Explosiveness  
   B-11 Flammability  
   B-12 Harmful dust, toxic gas or fumes  
   B-13 Hygroscopy  
   B-14 Interlocks, mats and agglomerates  
   B-15 Oils or fats present  
   B-16 Packs under pressure  
   B-17 Particle shape  
   B-18 Stickiness - adhesion  
   B-19 Contaminable  
   B-20 Very light, fluffy - may be windswept  

CHAPTER

II MATERIAL CLASSIFICATION CODE

3. Material Classification Code Chart 35

4. Material Classification Code Description 36
   A. Bulk Density Coding System 36
   B. Size Coding System 36
   C. Flowability Coding System 40
   D. Abrasive Coding System 41
   E. Miscellaneous Properties and Hazards Coding System 41

III TABLES OF MATERIALS AND THEIR CHARACTERISTICS

5. Preface To Material Table 42

6. Material Classification Code Chart 43

7. Material Tables 44
   A. Adipic Acid ... to ... Zinc Ore, Roasted 44-64

8. Table of Material Characteristics 65

IV LIST OF MINIMUM CHARACTERISTICS FURNISHED WITH INQUIRIES FOR QUOTATIONS FOR BULK MATERIAL HANDLING EQUIPMENT

V APPENDIX

9. Bibliography 67

10. Shear Testing Procedure 73
    A. Equipment 73
    B. Definitions 73
    C. Procedure 75
    D. Curve Plotting of Data 77
