ERIEZ SAYS THANKS IN A BIG WAY!

Erie, PA – Eriez Magnetics each year in late November, has a tradition that has been taking place for many years at the Erie facilities for employees and their families. They volunteer their time to assemble and distribute food baskets to those in need within the Erie community – and this year was no exception!

Over 100 volunteers from a broad array of departments (and their families)

spent days filling and then delivering 277 boxes of provisions to individuals and families as well as to SafeNet, a local organization dedicated to ending domestic violence. Throughout the year, to help fund the distribution, the dedicated member of Eriez' Orrie-M Community collected money at a variety of fundraising events.

CHIP AND STAMPED METAL PROCESSING & RECYCLE TAKES ON GROWING IMPORTANCE IN MANUFACTURING IN 2013!

Kalamazoo, MI – PRAB, Inc. a global leader in the design and manufacturer of material handling processing equipment for metal machining, stamping, and die cast scrap, announced its 2013 fiscal closing as a ground breaking year for engineered material handling and fluid filtration systems. Growth in the automotive and aerospace sectors has driven much of PRAB's increased equipment demand. Steady increase in appliance and general industrial manufacturing have also been noteworthy. Mike Hill, Vice President of Sales & Marketing for PRAB stated, "Our customers have come to rely on us more than ever for our material handling expertise, systems design, and product application knowledge. They know they need to improve their scrap removal efficiencies and increase the value of the scrap for resale; however; they are strapped with tight space constraints, OEM equipment layout limitations, and shortened capital project timelines. This is why demand for our systems engineering and our equipment has grown so dramatically."

In mid-2012 while planning for the next fiscal year, PRAB recognized the industrial market upswings and proactively added resources to meet the growing needs of customers. The company added engineers, CAD designers, skilled trades, and field technicians. Hill summarized, "In addition to serving our customers more effectively, we provided many jobs for families in southwest Michigan." For more information, call: 800.968.7722.

ALUMINUM CONVEYOR / SKATE WHEELS

Sterling, IL – Frantz launches new line of Aluminum Conveyor / Skate Wheels—Now offered in Standard and Tortoise Shell® Versions. This new product provides reduction in weight along with corrosion resistance benefits. The new offering provides an entry-level price point option as well as a Tortoise Shell® version for applications where enhance impact resistance and heavier load ratings are required.

Frantz entered the conveyor or skate wheel business in the 1930's with the introduction of a line of roller skates branded "Hustler Speed King", hence the term skate wheels. Later, conveyor wheels were mass produced for the war effort during WWII and then for use in the material handling industry.

Both the Standard aluminum wheel and the Tortoise Shell® aluminum wheel utilize the same internal components. The steel balls and raceways are heat treated and hardened under stringent processes to assure years of satisfactory product usefulness. **For more information, please contact the Frantz Manufacturing Company: Greg Yemm SVP of Sales at 913.522.0639 or Customer Service at 815.625.7063.**
