70 YEARS OF INNOVATION CELEBRATED!

Booth at the 1964 Foundry Show in Atlantic City

Neponset, IL – **Martin Engineering**, a global innovator in bulk material handling is celebrating 70 years of designing high-quality equipment and accessories, serving customers in a wide range of industries around the world. Along with spearheading efforts in safety and education, Martin Engineering has had a profound impact on efficient operations in coal, cement, aggregate, biomass and other industries across 6 continents. This has earned the company a reputation for excellent customer service and long-lasting equipment, which carry the best warranty in the industry.

In 1944, Edwin F. Peterson developed the Vibrolator®, the first industrial vibrator designed with compressed air propelling a steel ball around a raceway, which remains an industry standard to this day. Since then, the company has sustained steady growth based on a foundation of engineered solutions. “We undergo a continuous evolution as a company, always seeking new and better ways to serve customers and deliver solutions to.....continued reading on PAGE 2

WIRE BELT WINS NH's "#1 SMALL COMPANY" FOR SECOND YEAR IN A ROW!

www.wirebelt.com

Londonderry, NH – Wire Belt Company of America was recently named the Number One Small Company to Work for in NH by *Business NH Magazine*. They also won the number one spot in 2013. Overall this has been Wire Belt's third win as #1, and third win in the top ten, placing them in the Hall of Fame twice with six wins total.

“We’re honored to be recognized again as #1 for the second year in a row,” said David Greer, CEO of Wire Belt. “We wouldn’t be the company we are today if we didn’t live up to our company values.”

Not only does Wire Belt's core values of Family, Innovation, Integrity, Ownership, and Fun make it a great contender in the competition, but their strong environmental practices along with their dedication to keep manufacturing in NH definitely set it apart.

ERIEZ® 5-STAR SERVICE® REBUILDS VIBRATORY FEEDERS TO “AS NEW” CONDITION

Erie, PA – Eriez® 5-Star Service® provides a comprehensive rebuild program for vibratory feeders. Any equipment rebuilt by Eriez’ 5-Star Service team comes with an “As New” warranty which guarantees the work for one year.

By repairing their vibratory feeders rather than purchasing new equipment, customers can save up to 60 percent. “With the pressures of a challenging economy and the current price tags of new equipment, more companies than ever before are choosing to rebuild equipment,” says Eric Taylor, Eriez 5-Star Service Center Manager.

For Typical vibratory feeder rebuild projects, the 5-Star team inspects the electrical assembly and armature and replaces all wear items. The vibratory feeder is then tuned, tested, painted and tagged.

common industry problems,” said Edwin H. Peterson, son of the founder and current company Chairman.

Based in Neponset, Illinois, Martin Engineering remains family-owned, which is a point of pride for the organization, putting relationships at the center of its company culture. “Our close family structure offers the advantage of maintaining a streamlined company that involves and empowers employees at every level,” said Peterson. “There’s a great deal of satisfaction in knowing that a fourth generation of the family will soon grow into an ownership role within the company.”

Research and development is at the core of the company philosophy. After developing a series of successful industrial vibration designs, the company branched out in the 1960s to address a broader range of bulk material handling issues. “One milestone was the company’s decision to begin developing high-performance products for conveyor applications,” said Scott Hutter, CEO of Martin Engineering. “This introduced us to the global marketplace and a whole new realm of possibilities.” From designing air cannons to sonic horns and conveyor belt cleaners, the firm has applied for more than 700 patents – with more than 350 currently active – covering such diverse products as pneumatic valves, conveyor components, dust suppression devices, acoustic cleaners and even measurement tools. This prompted an expanding network of facilities, currently..... To read entire article, [click here](#).

EMPLOYEE WELLNESS PROGRAM INCLUDES FREE ON-SITE HEALTH CLINIC

Neponset, IL – **Martin Engineering**, has announced a pioneering step in the industry's health care by opening a free on-site medical clinic for employees and their families. Martin Engineering built two fully equipped examination rooms and partnered with a local hospital to staff them with an experienced full-time nurse practitioner and a trained medical assistant. Supported by a robust wellness program and company fitness facility, employees are able to enjoy a holistic corporate healthcare experience that is unprecedented in the bulk handling sector.

"Our choice to become a self-insured company allows us to better serve the needs of our employees and their families," said Edwin H. Peterson, Chairman of the Board of Martin Engineering. "Opening the in-house healthcare clinic was just a natural extension of that idea."

The medical clinic is available to all 250 employees at the company's Neponset headquarters, as well as their family members. It is open 8 a.m. to 2 p.m. three days per week and one day from noon to 7 p.m. Just like any health facility, patients make an appointment and are examined by a medical professional, but unlike other providers, no co-pay or fee is assessed, regardless of the procedure or test performed.

Standard exams and tests are carried out in a private and discrete manner. To be compliant with the Health Insurance Portability and Accountability Act (HIPAA), the onsite nursing staff has secure access to the partner hospital data center, updating patient records directly into the system. Simple information, such as biometric screening for access to wellness program rewards and reduced premiums, are revealed to the company upon employee consent.

A committee made up of nine or ten employees and HR staff set the goals and activities of the wellness program, as well as issuing a regular wellness-based newsletter. Monthly challenges are organized, such as the "Biggest Loser," walk/run programs, healthy recipe cook-off, 21 day exercise challenge and "lunch and learns" where employees are told about new challenges, updated health news and routines to maintain a healthy lifestyle. A fully equipped gym is provided for all employees and family.

WELCOME
JOHN GARRISON!

Morris, MN – **Superior Industries, Inc.**, announces the hire of industry veteran John Garrison as a new business development manager. Mr. Garrison's strong experience in bulk processing will be used to develop new opportunities for Superior's portable plants product line, its design-build division and the company's new wet processing division.

Mr. Garrison joins Superior after spending the last decade as a market area director at Terex in their Mineral Processing Systems (MPS) Division. In that roll, he was responsible for directing sales, marketing, distribution and after-market service teams for the Cedarapids, Simplicity and Canica product lines.

NEW WEBSITE
LAUNCHES!

Londonderry, NH – **Wire Belt Company of America**, recently launched a new, mobile-ready website. Boston Interactive, a full service digital marketing agency, helped with the redesign. In total, three websites were launched; one for each of the Wire Belt Companies, which include Wire Belt Company Limited in Sittingborne, UK and Wire Belt Company Osterloh in Lübeck, Germany.

"It was critical for us to update our website in this digital age," said CEO, David Greer, "We are proud to now have a website that not only showcases our varying product line, but also features our values and our rich history."
